

SUSTAINABILITY POLICY

SUSTAINABLE TOURISM

Our primary aim is to minimize the adverse effects of Tourism on social, cultural, economic, and environmental aspects and incorporate the most favourable practices to assist the local community. Our offerings and amenities are geared towards enhancing the sustainability of our suppliers, staff, and destinations, utilizing optimal sustainable techniques both internally and externally. We strive to educate our clients on how to modify their travel plans to achieve greater sustainability, emphasizing reduced carbon emissions while still catering to individual preferences. By putting the traveller in direct contact with a local travel expert, we ensure a customized experience that will make them feel at home in the country.

MISSION

Our goal is to assist in establishing a sustainable society and trade by promoting greater awareness of sustainability among all stakeholders. Informing travellers of sustainable destinations and practices; without sacrificing of comfort, convenience, and luxury. Enlightening travellers about the impact tourism has on local communities. Bringing to the forefront amazing, sustainable resorts, attractions, tours, and products.

VISSION

We at DAYRISE.GR we believe in the co-existence of Man & Environment and to contribute towards the best sustainable practices in Tourism. Our focus is to reduce the negative impacts of Tourism on Socio-cultural, economic, and environmental areas and bring in the best positive practices to support the local community. All our products and services will be towards improving the sustainability of our suppliers, team members and destinations. We will thrive our best to bring in most sustainable practices internally and externally. We will also try to educate our customers on possible improvisations of itineraries towards more sustainability with a focus on reduced CO2 emissions without affecting the individual preferences of a traveller. We are also committed to discuss with our partners about the possibility of reducing the carbon emissions connected to a travel.
